Lawn, trees need deep water

Coming through a dry winter is not only hard on crops, it is hard on lawns and trees.

Thomas County Extension agent Clint Milliman said, "now is the time to water lawns and deep water trees. Lawns do not always need power raking, unless there is a build up of as much as an inch of thatch, then they probably should be power raked," he added.

Milliman said most trees do not need to be fertilized, unless there is an iron deficiency, but the surrounding soil needs to have moisture to a depth of 12 to 18 inches. To test, push a rod in and see how far the moisture goes.

April 15 is usually the best time to apply crab grass prevention. Some areas are showing growth of dandelions, however, fall application of chemicals is the best time to get a kill on dandelions.

"The best advice for early lawn preparation right now is to water, water, water," Milliman said.

Soil temperatures are running 40 to 44 degrees, and for those wanting to get out in the garden early, the soil temperature to begin garden planting should ideally be above 50 degrees.

0% APR for 36 months¹

4105

- Hydrostatic transmission with Twin-Touch™ pedals
- Backhoe compatible
- Quik-Park™ loaders for easy attach/detach

Purchase two or more implements (excluding loaders) with a new John Deere Compact Utility Tractor and receive:
